Education

Politecnico di Torino, **Master's Degree** in Computer Engineering — Aug 2022 – April 2025

- Computer Graphics and Multimedia
- Grade: 110/110

Politecnico di Torino, **Bachelor's Degree** in Computer Engineering — July 2019 – July 2022

- Grade: 98/110

Publications

User Experience of PAL-HAND.Q, a Pneumatic Haptic Device for Finger-Level Gaming Interaction — March 2026

Fabrizio Sulpizio, ***Ciro Annicchiarico***, Giovanni Colucci, Simone Duretto

From Words to Emotions: Evaluating Text-to-Motion Body Language for Believable Emotions in Virtual Humans — April 2025

Stefano Calzolari, ***Ciro Annicchiarico***, Francesco Strada, Andrea Bottino

Experience

Luxia, AI Engineer — June 2026 – Present

- Development of specialised AI agents for a private-AI enterprise platform, enabling non-technical users to query internal databases, CRM and ERP systems in natural language and obtain insights, charts and reports.
- Design of multi-step agentic workflows, including retrieval over private company knowledge bases, tool calling and output validation, with models served in a private, GDPR-compliant cloud.

Politecnico di Torino, Research fellow — June 2025 – June 2026

- Research fellow at the Computer Graphics and Vision Laboratory (CG&VG Lab) of Politecnico di Torino.

Istituto Amedeo Avogadro, High school Teacher — Torino (TO), Italy — Oct 2023 – April 2024

- High school Teacher in Computer Science and Technology

Istituto Amedeo Avogadro, High school Teacher — Torino (TO), Italy — Jan 2023 – June 2023

- High school Teacher in Computer Science and Technology

Projects

VR Training Simulator for Healthcare Communication (Research Project)

- Developed a Virtual Reality (VR) application to train healthcare students in effective communication with nursing home patients. Engineered an interactive virtual agent using LangChain and LangGraph to manage complex, multi-functional conversational workflows. The AI agent engages users in real-time voice interactions, contextually adapts its responses, and dynamically evaluates the student's application of effective communication techniques.

- Tools Used: Python, **LangChain**, **LangGraph**, LLMs, **Azure** (Speech-to-Text), Open-source TTS Models, VR, Unity, C#

Animating Virtual Characters Using Generative AI (Master's Thesis) Project Link

- This thesis investigates AI-driven text-to-motion models as a means to generate realistic and emotionally expressive character animations from text. It provides a comparative evaluation of various models and explores emotional expressiveness through a user study. As part of the work, a custom tool was developed in Unity to integrate AI-generated animations into game engines.
- Tools Used: **Unity**, Blender, C#, Python, Anaconda

Discount Dive (University Project) Project Link Trailer Pitch

- The project goal was to simulate the presentation of a video game prototype to a publisher. The course involved the creation of all the necessary elements, including a trailer, a pitch document and a working prototype.
- **Contribution**: Programming (physics and combat system), 3D Modeling, teaser trailer animation, QA
- Tools Used: **Unity**, Blender, C#

AI Kingdom (GameJam Project) Project Link

- Developed this game during an intensive 2-day game jam as part of the 7th International Summer School on AI and Games, held in Malmö. AI Kingdom is a tiny fantasy sandbox where you shape the world, one cell at a time.
- **Contribution**: Programming (core gameplay logic), UI
- Tools Used: **Unity**, C#

AR Multiplayer App (University Project) Project Link

- Developed a prototype of a real-time sharing AR application of the same working environment that allows the two users to manipulate the same objects and communicate through an interactive writing system
- **Contribution**: Programming (networking), 3D Modeling
- Tools Used: **Unity**, **Hololens 2**, C#

Technologies

Languages: C++, C#, C, Python, Java

Frameworks: LangGraph/LangChain, PyTorch, TensorFlow

Data & Infrastructure: Airflow, Docker, Snowflake

Monitoring & Collaboration: Datadog, Linear, Notion

Engines: Unity, Unreal Engine

Software: Blender, Visual Studio, VSCode, GitHub, Office
